

AMC0x30D-Q1 Automotive, Precision, $\pm 1V$ Input, Basic and Reinforced Isolated Amplifiers With Fixed-Gain Differential Output

1 Features

- AEC-Q100 qualified for automotive applications:
 - Temperature grade 1: -40°C to $+125^{\circ}\text{C}$, T_A
- Linear input voltage range: $\pm 1V$
- High input impedance: $1G\Omega$ (typical)
- Supply voltage range:
 - High-side (VDD1): 3.0V to 5.5V
 - Low-side (VDD2): 3.0V to 5.5V
- Fixed gain: 2V/V
- Differential output
- Low DC errors:
 - Offset error: $\pm 1.5\text{mV}$ (maximum)
 - Offset drift: $\pm 10\mu\text{V}/^{\circ}\text{C}$ (maximum)
 - Gain error: $\pm 0.25\%$ (maximum)
 - Gain drift: $\pm 40\text{ppm}/^{\circ}\text{C}$ (maximum)
 - Nonlinearity: 0.05% (maximum)
- High CMTI: 50V/ns (minimum)
- Low EMI: Meets CISPR-11 and CISPR-25 standards
- Isolation ratings:
 - AMC0230D-Q1: Basic isolation
 - AMC0330D-Q1: Reinforced Isolation
- Safety-related certifications:
 - DIN EN IEC 60747-17 (VDE 0884-17)
 - UL1577

2 Applications

- [Traction inverters](#)
- [Onboard chargers](#)
- [DC/DC converters](#)

3 Description

The AMC0x30D-Q1 is a precision, galvanically isolated amplifier with a $\pm 1V$, high impedance input, and fixed-gain, differential output. The high-impedance input is optimized for connection to high-impedance resistive dividers or other voltage signal sources with high output resistance.

The isolation barrier separates parts of the system that operate on different common-mode voltage levels. The isolation barrier is highly resistant to magnetic interference. This barrier is certified to provide reinforced isolation up to 5kV_{RMS} (DWV package) and basic isolation up to 3kV_{RMS} (D package) (60s).

The AMC0x30D-Q1 outputs a differential signal that is proportional to the input voltage. The differential output is insensitive to ground shifts and enables routing the output signal over long distances.

The AMC0x30D-Q1 devices come in 8-pin, wide- and narrow-body SOIC packages, and are fully specified over the temperature range from -40°C to $+125^{\circ}\text{C}$.

Package Information

PART NUMBER	PACKAGE ⁽¹⁾	PACKAGE SIZE ⁽²⁾
AMC0230D-Q1 ⁽³⁾	D (SOIC 8)	4.9mm × 6.0mm
AMC0330D-Q1	DWV (SOIC 8)	5.85mm × 11.5mm

- (1) For more information, see the *Mechanical, Packaging, and Orderable Information* addendum.
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Pin Configuration and Functions

Figure 5-1. DWV and D Package, 8-pin SOIC (Top View)

Table 5-1. Pin Functions

PIN		TYPE	DESCRIPTION
NO.	NAME		
1	VDD1	High-side power	High-side power supply ⁽¹⁾
2	INP	Analog input	Analog input
3	SNSN	Analog input	GND1 sense pin and inverting analog input to the modulator. Connect to GND1.
4	GND1	High-side ground	High-side analog ground
5	GND2	Low-side ground	Low-side analog ground
6	OUTN	Analog output	Inverting analog output
7	OUTP	Analog output	Noninverting analog output
8	VDD2	Low-side power	Low-side power supply ⁽¹⁾

(1) See the [Power Supply Recommendations](#) section for power-supply decoupling recommendations.

6 Specifications

6.1 Absolute Maximum Ratings

see⁽¹⁾

		MIN	MAX	UNIT
Power-supply voltage	High-side VDD1 to GND1	−0.3	6.5	V
	Low-side VDD2 to GND2	−0.3	6.5	
Analog input voltage	INP, SNSN to GND1	GND1 − 3	VDD1 + 0.5	V
Analog output voltage	OUTP, OUTN to GND2	GND2 − 0.5	VDD2 + 0.5	V
Input current	Continuous, any pin except power-supply pins	−10	10	mA
Temperature	Junction, T _J		150	°C
	Storage, T _{stg}	−65	150	

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾ , HBM ESD classification level 2	±2000	V
		Charged-device model (CDM), per AEC Q100-011, CDM ESD classification level C6	±1000	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating ambient temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
POWER SUPPLY						
VDD1	High-side power supply	VDD1 to GND1	3	5.0	5.5	V
VDD2	Low-side power supply	VDD2 to GND2	3	3.3	5.5	V
ANALOG INPUT						
V _{Clipping}	Nominal input voltage before clipping output	INP to SNSN	−1.28		1.28	V
V _{FSR}	Specified linear input voltage	INP to SNSN	−1		1	V
ANALOG OUTPUT						
C _{LOAD}	Capacitive load	OUTP or OUTN to GND2			500	pF
		OUTP to OUTN			250	
R _{LOAD}	Resistive load	OUTP or OUTN to GND2		10	1	kΩ
DIGITAL I/O						
TEMPERATURE RANGE						
T _A	Specified ambient temperature		−40		125	°C

6.4 Thermal Information (D Package)

THERMAL METRIC ⁽¹⁾		D (SOIC)	UNIT
		8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	116.5	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	52.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	58.9	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	19.4	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	58.0	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

6.5 Thermal Information (DWV Package)

THERMAL METRIC ⁽¹⁾		DWV (SOIC)	UNIT
		8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	102.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	45.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	63.0	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	14.3	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	61.1	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

6.6 Power Ratings

PARAMETER		TEST CONDITIONS	VALUE	UNIT
P_D	Maximum power dissipation (both sides)	AVDD = DVDD = 5.5V	TBD	mW
P_{D1}	Maximum power dissipation (high-side)	AVDD = 3.6V	TBD	mW
		AVDD = 5.5V	TBD	
P_{D2}	Maximum power dissipation (low-side)	DVDD = 3.6V	TBD	mW
		DVDD = 5.5V	TBD	

6.7 Insulation Specifications (Basic Isolation)

over operating ambient temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	VALUE	UNIT
GENERAL				
CLR	External clearance ⁽¹⁾	Shortest pin-to-pin distance through air	≥ 4	mm
CPG	External creepage ⁽¹⁾	Shortest pin-to-pin distance across the package surface	≥ 4	mm
DTI	Distance through insulation	Minimum internal gap (internal clearance) of the insulation	≥ 15.4	μm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112	≥ 600	V
	Material group	According to IEC 60664-1	I	
	Overvoltage category per IEC 60664-1	Rated mains voltage ≤ 300V _{RMS}	I-IV	
		Rated mains voltage ≤ 600V _{RMS}	I-III	
DIN EN IEC 60747-17 (VDE 0884-17) ⁽²⁾				
V _{IORM}	Maximum repetitive peak isolation voltage	At AC voltage	1130	V _{PK}
V _{IOWM}	Maximum-rated isolation working voltage	At AC voltage (sine wave)	800	V _{RMS}
		At DC voltage	1130	V _{DC}
V _{IOTM}	Maximum transient isolation voltage	V _{TEST} = V _{IOTM} , t = 60s (qualification test), V _{TEST} = 1.2 × V _{IOTM} , t = 1s (100% production test)	4250	V _{PK}
V _{IMP}	Maximum impulse voltage ⁽³⁾	Tested in air, 1.2/50μs waveform per IEC 62368-1	5000	V _{PK}
V _{IOSM}	Maximum surge isolation voltage ⁽⁴⁾	Tested in oil (qualification test), 1.2/50-μs waveform per IEC 62368-1	10000	V _{PK}
q _{pd}	Apparent charge ⁽⁵⁾	Method a, after input/output safety test subgroups 2 and 3, V _{pd(ini)} = V _{IOTM} , t _{ini} = 60s, V _{pd(m)} = 1.2 × V _{IORM} , t _m = 10s	≤ 5	pC
		Method a, after environmental tests subgroup 1, V _{pd(ini)} = V _{IOTM} , t _{ini} = 60s, V _{pd(m)} = 1.3 × V _{IORM} , t _m = 10s	≤ 5	
		Method b1, at preconditioning (type test) and routine test, V _{pd(ini)} = V _{IOTM} , t _{ini} = 1s, V _{pd(m)} = 1.5 × V _{IORM} , t _m = 1s	≤ 5	
		Method b2, at routine test (100% production) ⁽⁷⁾ , V _{pd(ini)} = V _{IOTM} = V _{pd(m)} , t _{ini} = t _m = 1s	≤ 5	
C _{IO}	Barrier capacitance, input to output ⁽⁶⁾	V _{IO} = 0.5 V _{PP} at 1MHz	~1.5	pF
R _{IO}	Insulation resistance, input to output ⁽⁶⁾	V _{IO} = 500V at T _A = 25°C	> 10 ¹²	Ω
		V _{IO} = 500V at 100°C ≤ T _A ≤ 125°C	> 10 ¹¹	
		V _{IO} = 500V at T _S = 150°C	> 10 ⁹	
	Pollution degree		2	
	Climatic category		55/125/21	
UL1577				
V _{ISO}	Withstand isolation voltage	V _{TEST} = V _{ISO} , t = 60s (qualification test), V _{TEST} = 1.2 × V _{ISO} , t = 1s (100% production test)	3000	V _{RMS}

- (1) Apply creepage and clearance requirements according to the specific equipment isolation standards of an application. Maintain the creepage and clearance distance of a board design to make sure that the mounting pads of the isolator on the printed circuit board (PCB) do not reduce this distance. Creepage and clearance on a PCB become equal in certain cases. Techniques such as inserting grooves, ribs, or both on a PCB are used to help increase these specifications.
- (2) This coupler is suitable for *safe electrical insulation* only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
- (3) Testing is carried out in air to determine the surge immunity of the package.
- (4) Testing is carried out in oil to determine the intrinsic surge immunity of the isolation barrier.
- (5) Apparent charge is electrical discharge caused by a partial discharge (pd).
- (6) All pins on each side of the barrier are tied together, creating a two-pin device.
- (7) Either method b1 or b2 is used in production.

6.8 Insulation Specifications (Reinforced Isolation)

over operating ambient temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	VALUE	UNIT
GENERAL				
CLR	External clearance ⁽¹⁾	Shortest pin-to-pin distance through air	≥ 8.5	mm
CPG	External creepage ⁽¹⁾	Shortest pin-to-pin distance across the package surface	≥ 8.5	mm
DTI	Distance through insulation	Minimum internal gap (internal clearance) of the double insulation	≥ 15.4	μm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112	≥ 600	V
	Material group	According to IEC 60664-1	I	
	Overvoltage category per IEC 60664-1	Rated mains voltage ≤ 300V _{RMS}	I-IV	
		Rated mains voltage ≤ 6000V _{RMS}	I-III	
DIN EN IEC 60747-17 (VDE 0884-17) ⁽²⁾

- (7) Either method b1 or b2 is used in production.

6.9 Safety-Related Certifications (Basic Isolation)

VDE	UL
DIN EN IEC 60747-17 (VDE 0884-17), EN IEC 60747-17, DIN EN 61010-1 (VDE 0411-1) Clause : 6.4.3 ; 6.7.1.3 ; 6.7.2.1 ; 6.7.2.2 ; 6.7.3.4.2 ; 6.8.3.1	Recognized under 1577 component recognition and CSA component acceptance NO 5 programs
Basic insulation	Single protection
Certificate number: Pending	File number: Pending

6.10 Safety-Related Certifications (Reinforced Isolation)

VDE	UL
DIN EN IEC 60747-17 (VDE 0884-17), EN IEC 60747-17, DIN EN IEC 62368-1 (VDE 0868-1), EN IEC 62368-1, IEC 62368-1 Clause : 5.4.3 ; 5.4.4.4 ; 5.4.9	Recognized under 1577 component recognition and CSA component acceptance NO 5 programs
Reinforced insulation	Single protection
Certificate number: Pending	File number: Pending

6.11 Safety Limiting Values (D Package)

Safety limiting⁽¹⁾ intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to over-heat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $V_{DDX} = 5.5\text{V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mA
I_S	Safety input, output, or supply current	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $V_{DDX} = 3.6\text{V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mA
P_S	Safety input, output, or total power	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mW
T_S	Maximum safety temperature				150	$^{\circ}\text{C}$

- (1) The maximum safety temperature, T_S , has the same value as the maximum junction temperature, T_J , specified for the device. The I_S and P_S parameters represent the safety current and safety power, respectively. Do not exceed the maximum limits of I_S and P_S . These limits vary with the ambient temperature, T_A .

The junction-to-air thermal resistance, $R_{\theta JA}$, in the Thermal Information table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:

$T_J = T_A + R_{\theta JA} \times P$, where P is the power dissipated in the device.

$T_{J(\text{max})} = T_S = T_A + R_{\theta JA} \times P_S$, where $T_{J(\text{max})}$ is the maximum junction temperature.

$P_S = I_S \times V_{DD_{\text{max}}}$, where $V_{DD_{\text{max}}}$ is the maximum supply voltage for high-side and low-side.

6.12 Safety Limiting Values (DWV Package)

Safety limiting⁽¹⁾ intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to over-heat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $V_{DDX} = 5.5\text{V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mA
I_S	Safety input, output, or supply current	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $V_{DDX} = 3.6\text{V}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mA
P_S	Safety input, output, or total power	$R_{\theta JA} = \text{TBD}^{\circ}\text{C/W}$, $T_J = 150^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$			TBD	mW
T_S	Maximum safety temperature				150	$^{\circ}\text{C}$

- (1) The maximum safety temperature, T_S , has the same value as the maximum junction temperature, T_J , specified for the device. The I_S and P_S parameters represent the safety current and safety power, respectively. Do not exceed the maximum limits of I_S and P_S . These limits vary with the ambient temperature, T_A .
The junction-to-air thermal resistance, $R_{\theta JA}$, in the Thermal Information table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:
 $T_J = T_A + R_{\theta JA} \times P$, where P is the power dissipated in the device.
 $T_{J(\text{max})} = T_S = T_A + R_{\theta JA} \times P_S$, where $T_{J(\text{max})}$ is the maximum junction temperature.
 $P_S = I_S \times V_{DD_{\text{max}}}$, where $V_{DD_{\text{max}}}$ is the maximum supply voltage for high-side and low-side.

6.13 Electrical Characteristics

typical specifications are at $T_A = 25^\circ\text{C}$, $V_{DD1} = 5\text{V}$, and $V_{DD2} = 3.3\text{V}$

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
ANALOG INPUT							
C _{IN}	Input capacitance		TBD			pF	
R _{INP}	Input impedance	INP pin, T _A = 25°C	1			GΩ	
I _{IB}	Input bias current	INP = GND1, T _A = 25°C	−15	3.5	15	nA	
CMTI	Common-mode transient immunity		50			V/ns	
ANALOG OUTPUT							
	Nominal gain		2			V/V	
V _{CMout}	Output common-mode voltage		1.39	1.44	1.49	V

VDD1 _{UV}	High-side undervoltage detection threshold	VDD1 rising	2.5	2.6	2.7	V	
		VDD1 falling	1.9	2.0	2.1		
VDD2 _{UV}	Low-side undervoltage detection threshold	VDD2 rising	2.5	2.6	2.7	V	
		VDD2 falling	1.9	2.0	2.1		

(1) The typical value includes one standard deviation (σ) at nominal operating conditions.

(2) This parameter is input referred.

(3) THD is the ratio of the rms sum of the amplitudes of first five higher harmonics to the amplitude of the fundamental.

(4) Offset error temperature drift is calculated using the box method, as described by the following equation:

$$TCV_{OS} = (Value_{MAX} - Value_{MIN}) / TempRange$$

- (5) Gain error temperature drift is calculated using the box method, as described by the following equation:

$$TCE_G (ppm) = (Value_{MAX} - Value_{MIN}) / (Value_{(T=25^{\circ}C)} \times TempRange) \times 10^6$$

6.14 Switching Characteristics

over operating ambient temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_r	Output signal rise time			1.8		μs
t_f	Output signal fall time			1.8		μs
	V_{INP} to V_{OUTx} signal delay (50% – 10%)	Unfiltered output		2.4		μs
	V_{INP} to V_{OUTx} signal delay (50% – 50%)	Unfiltered output		3.0	3.2	μs
	V_{INP} to V_{OUTx} signal delay (50% – 90%)	Unfiltered output		4.2		μs
t_{AS}	Analog settling time	AVDD step to 3.0V with DVDD $\geq$ 3.0V, to V_{OUTP} , V_{OUTN} valid, 0.1% settling		50	100	μs

7 Detailed Description

7.1 Overview

The AMC0x30D-Q1 is a precision, galvanically isolated amplifier with a $\pm 1V$, high impedance input, and fixed-gain, differential output. The input stage of the device drives a second-order, delta-sigma ($\Delta\Sigma$) modulator. The modulator converts the analog input signal into a digital bitstream that is transferred across the isolation barrier that separates the high side from the low side.

On the low-side, the received bitstream is processed by a fourth-order analog filter that outputs a differential signal at the OUTP and OUTN pins. This differential output signal is proportional to the input signal.

The SiO₂-based, capacitive isolation barrier supports a high level of magnetic field immunity, as described in the [ISO72x Digital Isolator Magnetic-Field Immunity application note](#). The digital modulation used in the AMC0x30D-Q1 transmits data across the isolation barrier. This modulation, and the isolation barrier characteristics, result in high reliability and high common-mode transient immunity.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Analog Input

The input stage of the AMC0x30D-Q1 feeds a second-order, switched-capacitor, feed-forward $\Delta\Sigma$ modulator. The modulator converts the analog signal into a bitstream that is transferred across the isolation barrier, as described in the [Isolation Channel Signal Transmission](#) section.

There are two restrictions on the analog input signal. First, if the input voltage exceeds the value specified in the [Absolute Maximum Ratings](#) table, the input current must be limited to 10mA. This limitation is caused by the device input electrostatic discharge (ESD) diodes turning on. Second, linearity and noise performance are specified only when the input voltage is within the linear fullscale range (V_{FSR}). V_{FSR} is specified in the [Recommended Operating Conditions](#) table.

7.3.2 Isolation Channel Signal Transmission

The AMC0x30D-Q1 uses an on-off keying (OOK) modulation scheme, as shown in [Figure 7-1](#), to transmit the modulator output bitstream across the SiO₂-based isolation barrier. The transmit driver (TX) as illustrated in the [Functional Block Diagram](#) transmits an internally generated, high-frequency carrier across the isolation barrier to represent a digital *one*. However, TX does not send a signal to represent a digital *zero*. The nominal frequency of the carrier used inside the AMC0x30D-Q1 is 480MHz.

The receiver (RX) on the other side of the isolation barrier recovers and demodulates the signal and provides the input to the fourth-order analog filter. The AMC0x30D-Q1 transmission channel is optimized to achieve the highest level of common-mode transient immunity (CMTI) and the lowest level of radiated emissions. The high-frequency carrier and RX/TX buffer switching cause these emissions.

Figure 7-1. OOK-Based Modulation Scheme

7.3.3 Analog Output

The AMC0x30D-Q1 provides a differential analog output voltage on the OUTP and OUTN pins that is proportional to the input voltage. For input voltages in the range from $V_{FSR, MIN}$ to $V_{FSR, MAX}$, the device has a linear response with an output voltage equal to:

$$V_{OUT} = 2 \times V_{IN} = 2 \times (V_{INP} - V_{SNSN}) \quad (1)$$

At zero input, both pins output the same common-mode output voltage V_{CMOUT} , as specified in the *Electrical Characteristics* table. For absolute input voltages greater than $|V_{FSR}|$ but less than $|V_{CLIPPING}|$, the differential output voltage continues to increase in magnitude, but with reduced linearity performance. The outputs saturate at a differential output voltage of $V_{CLIPOUT}$, as shown in Figure 7-2, if the input voltage exceeds the $V_{CLIPPING}$ value.

Figure 7-2. Input to Output Transfer Curve of the AMC0x30D-Q1

The AMC0x30D-Q1 output offers a fail-safe feature that simplifies diagnostics on a system level. Figure 7-2 shows the behavior in fail-safe mode, in which the AMC0x30D-Q1 outputs a negative differential output voltage that does not occur under normal operating conditions. The fail-safe output is active:

- When the high-side supply V_{DD1} of the AMC0x30D-Q1 device is missing
- When the high-side supply V_{DD1} falls below the undervoltage threshold $V_{DD1_{UV}}$

Use the maximum $V_{FAILSAFE}$ voltage specified in the *Electrical Characteristics* table as a reference value for fail-safe detection on a system level.

7.4 Device Functional Modes

The AMC0x30D-Q1 operates in one of the following states:

- OFF-state: The low-side supply (VDD2) is below the $VDD2_{UV}$ threshold. The device is not responsive. OUTP and OUTN are in Hi-Z state. Internally, OUTP and OUTN are clamped to VDD2 and GND2 by ESD protection diodes.
- Missing high-side supply: The low-side of the device (VDD2) is supplied and within the [Recommended Operating Conditions](#) section. The high-side supply (VDD1) is below the $VDD1_{UV}$ threshold. The device outputs the $V_{FAILSAFE}$ voltage.
- Analog input overrange (positive fullscale input): VDD1 and VDD2 are within recommended operating conditions but the analog input voltage V_{IN} is above the maximum clipping voltage $V_{Clipping, MAX}$. The device outputs positive $V_{CLIPout}$.
- Analog input underrange (negative fullscale input): VDD1 and VDD2 are within recommended operating conditions but the analog input voltage V_{IN} is below the minimum clipping voltage $V_{Clipping, MIN}$. The device outputs negative $V_{CLIPout}$.
- Normal operation: VDD1, VDD2, and V_{IN} are within the recommended operating conditions. The device outputs a differential voltage that is proportional to the input voltage.

Table 7-1 lists the operating modes.

Table 7-1. Device Operational Modes

OPERATING CONDITION	VDD1	VDD2	V_{IN}	DEVICE RESPONSE
OFF	Don't care	$VDD2 < VDD2_{UV}$	Don't care	OUTP and OUTN are in Hi-Z state. Internally, OUTP and OUTN are clamped to VDD2 and GND2 by ESD protection diodes.
Missing high-side supply	$VDD1 < VDD1_{UV}$	Valid ⁽¹⁾	Don't care	The device outputs the $V_{FAILSAFE}$ voltage.
Input overrange	Valid ⁽¹⁾	Valid ⁽¹⁾	$V_{IN} > V_{Clipping, MAX}$	The device outputs positive $V_{CLIPout}$.
Input underrange	Valid ⁽¹⁾	Valid ⁽¹⁾	$V_{IN} < V_{Clipping, MIN}$	The device outputs negative $V_{CLIPout}$.
Normal operation	Valid ⁽¹⁾	Valid ⁽¹⁾	Valid ⁽¹⁾	The device outputs a differential voltage that is proportional to the input voltage.

(1) "Valid" denotes within the recommended operating conditions.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Best Design Practices

Do not leave the analog input (INP pin) of the AMC0x30D-Q1 unconnected (floating) when the device is powered up. If the device input is left floating, the output of the device is not valid.

Do not connect protection diodes to the input (INP pin) of the AMC0x30D-Q1. Diode leakage current potentially introduces significant measurement error especially at high temperatures. The input pin is protected against high voltages by the ESD protection circuit and the high impedance of the external resistive divider.

9 Power Supply Recommendations

In a typical application, the high-side power supply (VDD1) for the AMC0x30D-Q1 is generated from the low-side supply (VDD2) by an isolated DC/DC converter. A low-cost option is based on the push-pull driver [SN6501-Q1](#) and a transformer that supports the desired isolation voltage ratings.

The AMC0x30D-Q1 does not require any specific power-up sequencing. The high-side power supply (VDD1) is decoupled with a low-ESR, 100nF capacitor (C1) parallel to a low-ESR, 1μF capacitor (C2). The low-side power supply (VDD2) is equally decoupled with a low-ESR, 100nF capacitor (C3) parallel to a low-ESR, 1μF capacitor (C4). Place all four capacitors (C1, C2, C3, and C4) as close to the device as possible. [Figure 9-1](#) shows a decoupling diagram for the AMC0x30D-Q1.

Figure 9-1. Decoupling of the AMC0x30D-Q1

Capacitors provide adequate effective capacitance under the applicable DC bias conditions experienced in the application. Multilayer ceramic capacitors (MLCC) typically exhibit only a fraction of the nominal capacitance under real-world conditions. Consider this factor when selecting these capacitors. This issue is especially acute in low-profile capacitors, in which the dielectric field strength is higher than in taller components. Reputable capacitor manufacturers provide capacitance versus DC bias curves that greatly simplify component selection.

10 Layout

10.1 Layout Guidelines

The [Layout](#) section details a layout recommendation with the critical placement of the decoupling capacitors (as close as possible to the AMC0x30D-Q1 supply pins). This example also depicts the placement of other components required by the device. For best performance, place the sense resistor close to the device input pin (INP).

11.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](https://www.ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

11.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
