

7-CHANNEL VIDEO SWITCH WITH INTEGRATED LEVEL SHIFTERS

Check for Samples: [TS3V712EL](#)

FEATURES

- Supports 7-Channel VGA Signals (R, G, B, H_{SYNC}, V_{SYNC}, DDC CLK, and DDC DAT)
- Integrated Level-Shifting Buffers for H_{SYNC} and V_{SYNC} Channels
- Operating Voltage
 - V_{DD} = 3.3 V ±10%
 - V_{DD_5} = 5 V ±10%
- High Bandwidth of 1.3 GHz (–3 dB)
- Low ON-State Resistance and Input/Output Capacitance
 - r_{ON} = 4 Ω (Typ)
 - C_{ON} = 8 pF (Typ)
- Voltage Clamping NMOS Switches for SCL and SDA Channels
- ESD Performance (Pins 12–15, 17–22, 24–27)
 - ±2-kV Contact Discharge (IEC61000-4-2)
 - 7-kV Human Body Model (to GND)
- ESD Performance (All Pins)
 - 3-kV Human Body Model (JESD22-A114E)
- 32-Pin Quad Flat Pack No-Lead [QFN (RTG)] Package

APPLICATIONS

- Notebook Computers
- Docking Stations
- KVM Switches

The exposed center pad must be connected to GND.

DESCRIPTION/ORDERING INFORMATION

The TS3V712EL is a high bandwidth, 7-channel video demultiplexer for switching between a single VGA source and one of two end points. The device is designed for ensuring video signal integrity and minimizing video signal attenuation by providing high bandwidth of 1.3 GHz.

The TS3V712EL has integrated level shifting buffers for the H_{SYNC} and V_{SYNC} signals which provide voltage level translation between 3.3 V and 5 V logic. The SCL and SDA lines use NMOS switches which clamp the output voltage to 1 V below V_{DD}.

The video signals are protected against ESD with integrated diodes to V_{DD} and GND that support levels up to ±2-kV Contact Discharge (IEC61000-4-2) and 7-kV Human Body Model (JESD22-A114E).

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) The package thermal impedance is calculated in accordance with JESD 51-1.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.
